

# TROOPER SL CHIN GUARD MOUNTING HARDWARE

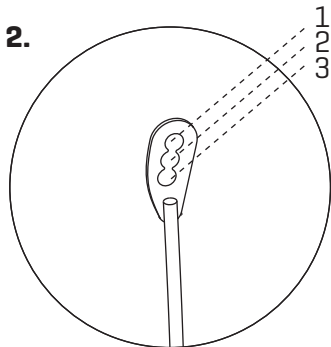

1.

**Fig 1.**

Place the Chin Guard as illustrated. Insert the screws and washers into the threaded inserts in the helmet shell through the holes in mounting tabs of the Chin Guard. Tighten with a Phillip's-head PH2 screw driver. Use of other heads than PH2 might ruin the screw.

2.

**Fig 2.**

Adjust the preferred angle by choosing either of the three holes in the two front mounting tabs of the Chin Guard. Make sure it's mounted the same on both sides.

The Chin Guard is designed to prevent gates from hitting your face. Only use the Chin Guard in a closed slalom course. Do not use a chin guard while participating in GS, Super G, DH or while free-skiing.
