

Blaster Repair

Goggle strap button on the helmet has broken or come loose. You have contacted customer service and we have sent out to you a new goggle strap and button.

To complete the repair you need the following, a hammer and punch tool or something similar. Like a flat metal piece that has the same size as the rivet. Also a pliers

Use the pliers to take of the existing button that is on the helmet.

#1

#2

#3

#4

- Equipment needed for the repair. Picture #1
- Take out the old strap that is broken.
- Replace it with the new one.
- Thread the new strap through the helmet without the button on.
- Place the male button on the end of the strap, picture #2
- Turn the strap around and place the female button in place, like #3
- Use the punch tool or similar, place it on the female end to hammer down carefully the male end of the rivet, #4
- Now the repair is complete.
